## **Artisan Herbal Supplements**

All of our products are of the utmost quality. Every ingredient is either organic, sustainably wildcrafted, or locally sourced from Vermont farms (also grown organically).

Rogue Herbalist utilizes a one-of-a-kind process that utilizes Reverse Osmosis Maple Water (ROM Water) in the decoction process. ROM water is the water that is removed from Maple sap in the process of making maple syrup. This means the water we use in our extracts was previously the lifeblood of the maple trees, bringing with it *the essence of the forest*. Because the water is purified by reverse osmosis, this means that the water is largely devoid of minerals and there is more “space” or more of a vacuum for herbal constituents to extract into.

The alcohol we use is the highest quality 95% organic cane alcohol which is then blended with decoction to the appropriate alcohol content to ensure optimal extraction of herbal constituents.

We are the only herbal extract company in the world using ROM water in our tinctures.

When you buy our products you are supporting multiple local Vermont businesses. We are working hard to keep our dollars in the local economy!

Pure Maple Sap is gathered and run through the Reverse Osmosis machine.
